Position: Junior Software Engineer

Company Overview

Buildable, a custom software development company based in McMinnville OR, is looking for a junior software engineer to join the development team.

Who is Buildable? We are a team of dynamic and motivated people, creatives, engineers, and project managers who build creative and innovative software solutions for our clients. We work hard, have a sense of humor, value human connections, and invest in the ongoing training of our people. Great people make great software.

Position Description

The Junior Software Engineer duties include and are not limited to:

- Designing, programming, troubleshooting, and debugging of computer programs, web applications, mobile applications and other software programs as needs arise
- Frontend and/or backend programming
- Following provided UX/UI design systems and frontend style guides
- Participating in design-engineering review
- Estimating time to complete development tasks
- Meeting with customers when necessary
- Following task acceptance criteria
- Performing quality assurance testing
- Reporting progress during standups
- Communicating task progress with Project Manager
- Occasional (rare) work in evenings or weekends to meet software delivery deadlines

Qualifications:

- BS or MS in computer science or related field
- Relevant experience

Technical Skills:

- Experience with JavaScript or TypeScript required (TypeScript preferred)
- Experience with C#, Java, or PHP required (C# preferred)

- Experience with ASP.NET or Laravel required (ASP.NET preferred)
- Experience with relational databases required (Microsoft SQL Server preferred)
- Experience with data formats: JSON, XML, or CSV required (JSON preferred)
- Experience with source control Git required
- Experience with GitLab or Jira desired
- Working knowledge of Entity Framework (with LINQ) or other ORM
- Working knowledge of Angular and/or ReactJS
- Hosting environment knowledge desired: AWS, Azure
- Web server knowledge desired: NGINX, Apache, or IIS

Location:

- McMinnville, OR
- Minimum two workdays in the office required. Otherwise remote OK.
- Local candidate highly preferred. Fully remote will be considered for the right candidate.

The perfect candidate is one who:

- Likes challenges and to work in a fast-paced environment
- Uses time wisely and asks for clear priorities
- Understands the need to deliver key functionality first, then build out the details
- Clarifies expectations and references before jumping into code
- Takes time to prepare thoughtful questions and possible solutions
- Has a real eye for detail and spotting design patterns
- Enjoys following through and clearing ambiguity
- Addresses conflict with empathy
- Enjoys going the extra mile to deliver high-quality code
- Values UX/UI design and seeks to understand best practices
- Is well-spoken and communicates clearly and directly
- Can grasp and convey effort-level of technical solutions
- Takes initiative and enjoys helping others
- Enjoys discussing and optimizing processes and systems
- Is a lifelong learner
- Truly believes "teamwork makes the dream work"
- Enjoys "leaving no stone left unturned" and investigating the unknown
